

# Public Information Session Wednesday June 21<sup>st</sup>, 4:00-6:00pm. Proposed SBA Telecommunications Tower at Baltimore Recreation Center

SBA Canada (SBA) is a leading independent owner and operator of wireless communications infrastructure across North, Central and South America. In our site leasing business, we lease antenna space on our multi-tenant towers and other structures to a variety of wireless service providers under long-term lease contracts.

To support the needs of customers and the community the proposed structure is required to improve and maintain services due to continued growth in demand for wireless services. SBA strongly promotes the shared use of our communications structure sites for all potential service providers and customers. In doing so, we work to minimize duplicate and unnecessary antenna sites. The proposed tower will accommodate up to 3 carriers.

SBA leases antenna space on our multi-tenant towers and other communications facilities to a variety of wireless service providers under long-term lease contracts. Our customer base includes all the leading national and regional wireless communications carriers, as well as local wireless customers, representing multiple technologies. Our sites provide excellent coverage solutions to metro areas, suburban neighborhoods, rural populations, major highways, commuter zones, traffic corridors, as well as some industrial, retail, healthcare and academic campuses.

Please join us for a public information session on **Wednesday June 21<sup>st</sup>, 4:00pm-6:00pm** at the Baltimore Recreation Centre, 23 Community Center Rd, Baltimore, ON.

An SBA representative will provide residents with information on the proposal of a new shared telecommunications structure and answer questions the public may have .

Thank you.
